

## Company Profile

Resound has been delivering intelligent radio communication solutions to businesses since 1991. In that time, the company has built up a customer list of more than 1,000 strong, including some of the largest business names in the UK.

Keys to success have been adherence to strict quality policies (including ISO 9001 accreditation) and a pragmatic flexibility when designing and integrating solutions. This in turn has led to the building of long-term customer relationships that have spanned different generations of radio technology.

The company offers a full range of radio communications products and services, including lease hire options for reducing financial impact. A particular strength is the ability to integrate radio systems with Building Management Systems, alarms, telephone and computer networks, to deliver robust solutions that are tailored to each customer's specific needs.

Following on from installation and commissioning, Resound offers comprehensive support and maintenance services, including 24x7 coverage where essential.
